DETAILED ACTION

Applicant's election with traverse of Group I, claims 1-7, in the reply filed on 4/5/05 is acknowledge. The invention in Group I is an organic light-emitting device comprises a plurality of light-emitting elements and the invention in Group II is a method of manufacturing the device. Group I and Group II are related as process of making and product made. Therefore, the inventions are distinct and the restriction is proper. The restriction is final. It is suggested that non-elected claims 8-13 be canceled in the response to this Office Action.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-n are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki et al. (US 6,750,472) in view of Maruyama et al. (US 6,724,150).

With regard to claims 1-2 and 4-7, Suzuki et al. disclose an organic electroluminescent device (col. 4, line 36 to col. 15, line 55 and fig. 1). The device would apply to the flat panel display apparatus (col. 1, lines 20-27).

The device comprises a light-emitting layer 33 having a predetermined thickness
 (col. 7, lines 12-16 and fig. 1);

Application/Control Number: 10/760,178
Art Unit: 2814

- A hole transport layer 31 for supplying positive holes to the light-emitting layer
 33:
- The device comprises an adjustment to the deterioration of emission
 characteristics over time (col. 5, lines 47-50) by selecting the correct host material
 for the hole transport layer 31 having higher bandgap than electron capture layer
 32 (col. 5, lines 4-10) and deposit the predetermined thickness of the hole
 transport layer 31 (col. 6, lines 53-65 and fig. 1);
 - Maruyama et al. disclose a display device where the pixel portion 112 is composed of organic light-emitting elements (Maruyama col. 1, lines 45-47 and fig. 5) and the organic light-emitting layer 114 comprises an electron transport layer, a light-emitting layer, and a hole transport layer (Maruyama col. 12, lines 37-46). Maruyama et al. teach the OLED would reduce weight and thickness of the display (Maruyama col. 1, lines 48-50). Suzuki et al. and Maruyama et al. have substantially the same environment of light display panel having organic light-emitting elements. Thus, it would have been obvious for the one with ordinary skill in the art to modify Suzuki's device with the teaching of Maruyama et al. to have a plurality of light-emitting units in a display device in order to reduce weight and thickness of the device.

With regard to claim 3, in addition to the limitations disclosed in claim 1 above, Suzuki et al: also disclose:

An electron transport (donor) layer 34 (fig. 1);

Application/Control Number: 10/760,178
Art Unit: 2814

Suzuki et al. deposit the predetermined thickness of the electron transport layer 31
 (col. 7, lines 28-30 and fig. 1).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Wai-Sing Louie whose telephone number is (571) 272-1709. The examiner can normally be reached on 7:30 AM to 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wael Fahmy can be reached on (571) 272-1705. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
